

MBO – Direct Mail and Letterfold Finishing Systems

Available as an inline or near-line solution

The Transactional Finishing Systems from The MBO Group are designed with the highest dependability, flexibility, and job integrity features. This makes them ideal for processing bank statements, letterfold products and sensitive materials at high speeds. With automation, these solutions can be quickly and easily configured for a variety of job applications with just the touch of a button, which minimizes waste and reduces the

number of touches required. Thanks to MBO's modular approach to finishing, these solutions can be easily adapted for specialty needs such as camera inspection, gluing, or complex folding applications. Furthermore, a variety of infeed systems are available - meaning that this solution can be configured for cut-sheet or web-finishing processes.

This solution generally consists of the following modules:

- Feeder Unit (Pile Fed or Web Fed)
- Split and Merge or Plow Unit (Web Fed Only)
- Folding Machine with 4 or 6 Plates
- Shingled Stream Delivery
- Additional Modules For Specialty Applications
 - Automated Banding Delivery
 - Camera Inspection Systems
 - Glue Application Systems (Hot or Cold)
