

Innovative Finishing

Solutions

MBO's Modular Rollfed Finishing Concept

"We have MBO finishing because we make the finishing match the needs of the customer, not the other way around...Our goal is to touch it once to print it and touch it once to finish it. This is how we meet the delivery time requirements for our customers".

- **Dave Fenske**
Fenske Media Group

Benefits of the Modular Approach

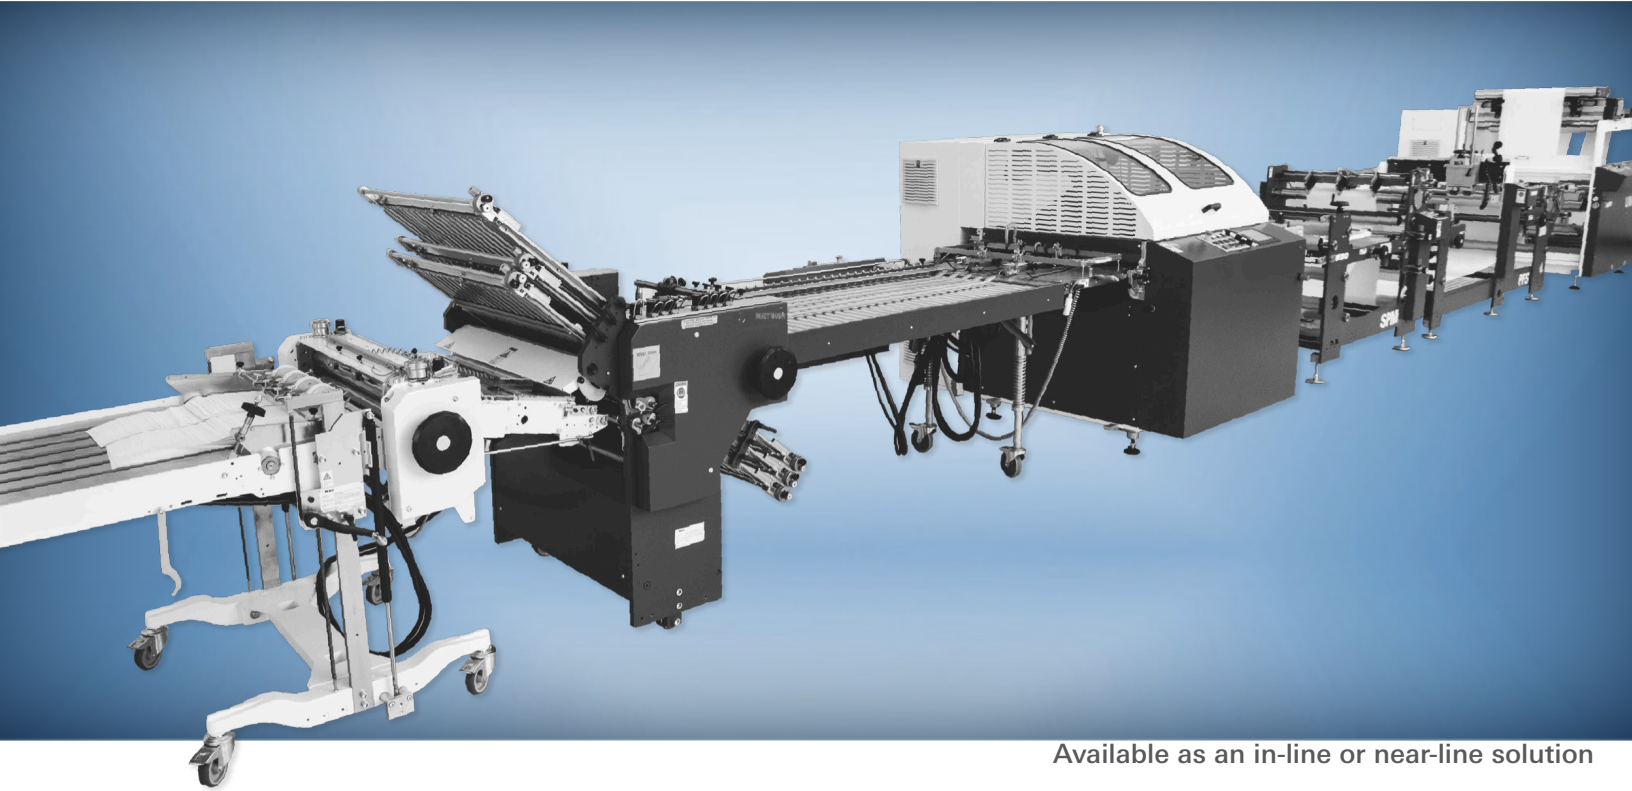

- Flexibility to meet various customer needs
- One-step finishing
- Mix-and-Match modules to create new products
- Many available modules including: Cutting Units, Folding Machines, Registration Tables, Plow-folding & Knife Folding Units, Glue Application Systems (Hot or Cold), Wide Range of Deliveries

Rollfed Letterfold/Postcard Solutions

Available as an in-line or near-line solution

The Direct Mail Market

MBO's high speed letterfold system is the most popular solution for roll fed finishing in the commercial print market. The modular design concept integrates the capabilities of MBO's buckle folder technology to the web finishing market, easily adapting itself to most any format letter, or newsletter layout. With a maximum web speed of 824fpm, 4" to 80" variable cutoff, and low labor requirement, there is no better way to finish your mail piece directly from the roll.

MBO's modular design offers unmatched flexibility to grow with your business and keep pace with changing market demands. Add modules for dynamic perforating, scoring, coating, plowing, gluing, trimming, gatefolds, or split-and-merge to create highly customized, premium results. With these capabilities, MBO finishing systems help you produce mail pieces that capture attention, stand out from the competition, and drive stronger response rates.

Specifications

- Web Width Max23"
- Cutoff Length4" to 80"
- Max Web Speed824fpm
- InterfaceNearline or In-line
- ConfigurationModular
- Sheet TrimChip-Out, Edge Trim, Gully Cut
- Fold Plates6/4
- Output2 - 4 Streams
- EmbellishmentDynamic Perf, AQ - UV Coating
- Delivery SystemsShingle, Stack, Bundle

Rollfed Self-mailer Solutions

Recommended for near-line solutions

Self-mailers for Marketing

MBO steps up their roll finishing portfolio with modules that cut, fold, perf, score, tip-on and glue, using up to 12-pt stock, all in one step. The key to success for production of complex products is to use a single step finishing process. MBO's modular concept shines in this niche where finishing lines can be reconfigured easily and quickly for multiple process finishing. New plug and play modules can be easily added to existing lines preserving your initial investment while still growing with the needs of your customers.

Specifications

- Web Width Max23"
- Cutoff Length4" to 80"
- Max Web Speed500fpm
- InterfaceNearline Recommended
- ConfigurationModular
- Sheet TrimChip-Out, Edge Trim, Gully Cut
- Fold MethodPlow Vacuum Table
- Output1 - 2 Streams

Rollfed Miniature Folding Solutions

Miniature Folding From MBO

This solution serves a niche industry serving medical, pharmaceuticals, cosmetics, electronics and other specialty packaging, also known as product information inserts or PI's. The segment uses a wide range of stocks from 40gsm pharma paper to glossy commercial grades. The roll fed sheeting system is used as a feeding unit, able to send trimmed, perfed, scored, and cut sheets to the H+H miniature folding and finishing modules. Along with folders that can have up to 24 buckle plates and fold lengths as low as 3/4", special modules that press, glue, label, vertically stack and automatically tray the product are integrated into these solutions. The goal is to fully finish the product in one step to reduce turn time and keep labor requirements as low as possible.

Specifications

- Web Width Max23"
- Max Web Speed500fpm
- InterfaceNearline or In-line
- ConfigurationModular
- Stock Range40gsm to Cover wts.
- Fold Lengths3/4" and up
- Buckle Fold Plates6 to 24
- Layout1 up to 4 up

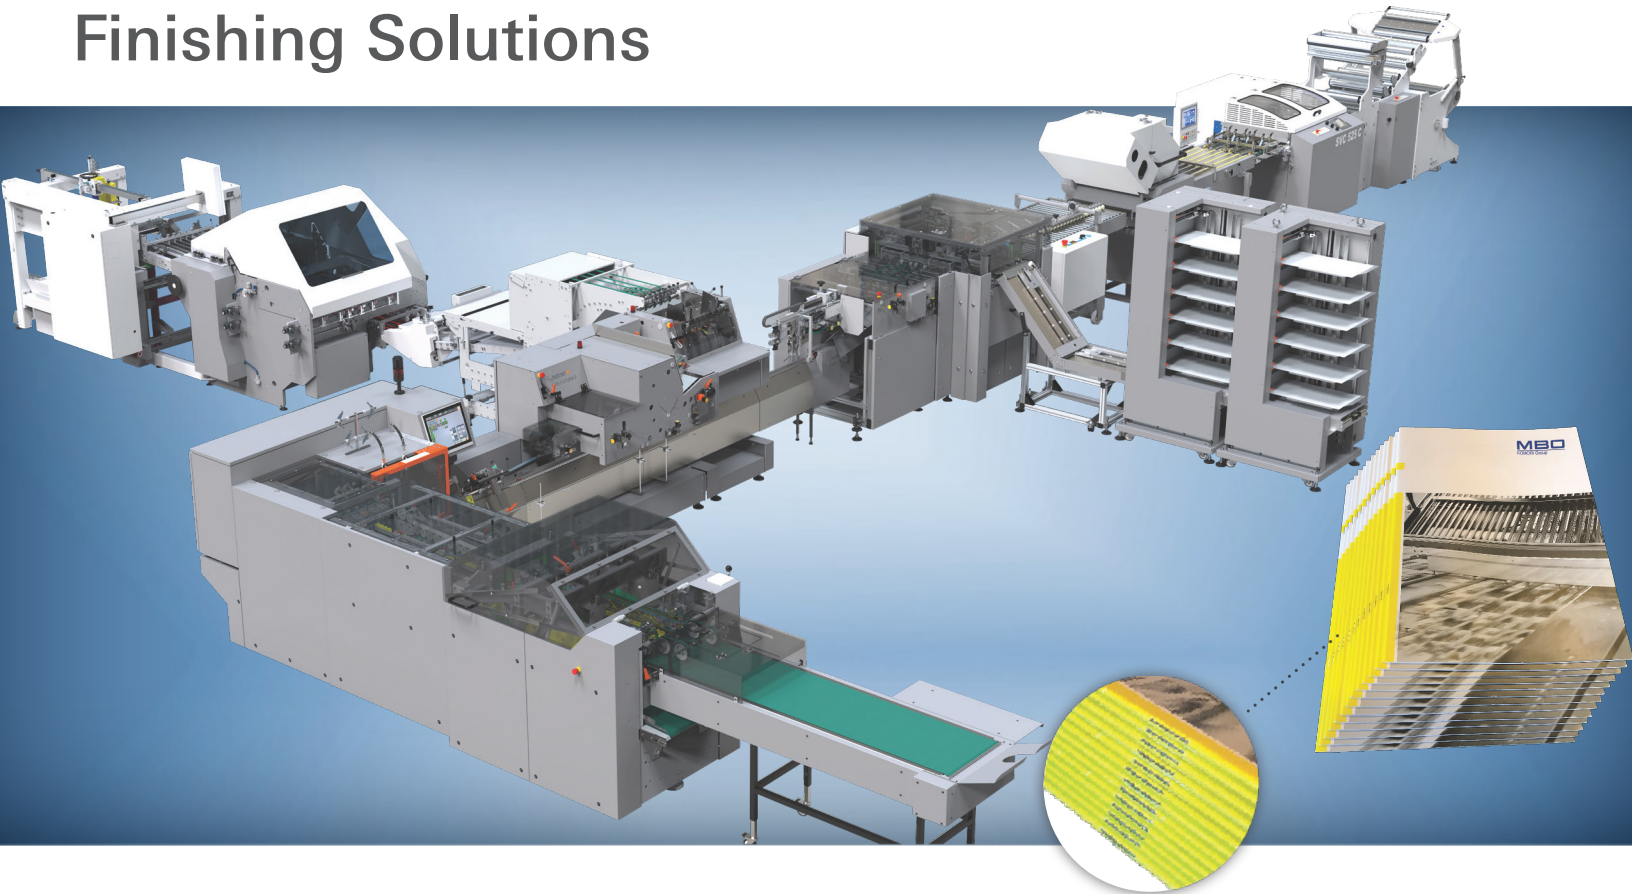

Application, environment, operator skill and substrate conditions could affect published ratings.

Rollfed Book Finishing Solutions

Saddle-stitch for Digital Print

Digital stitchers can be paired with MBO roll fed or cutsheet finishing systems to produce a variety of stitched products, directly from the roll or sheet. These systems allow for purely digital products, all conventional products and a hybrid product marrying the benefits of traditional offset and digital print, with self-covers or separate covers. With speed ratings up to 14,000 books per hour, selective folding to reduce blank pages, and dynamic perfin for page embellishment, there is no better or more productive solution available than having an MBO rollfed or cutsheet infeed on your digital stitching solution.

Specifications

- Web Width Max23" or 30"
- Cutoff Length4" to 80"
- Booklet FormatsA4, A5, Tabloid, 8.5"x11", 5.5"x8.5"
- InterfaceNearline
- ConfigurationModular
- Fold Plates6
- Booklet BuildSignature Based
- Page JumpsSelectable, 4 Pages
- OutputSingle or Multiple
- EmbellishmentDynamic Perf,
- Delivery SystemsShingle, Stack, Bundle

MBO Unwinders and Rewinders

Web Guide

Splice Table

Shaft Chuck

Roll Processing from MBO

MBO concentrates on the 23" inkjet market with its UW23 and RW23. Printing and finishing is all about tension: "Control the tension well and the final result will show well." Press and finishing uptime is directly related to the quality control of unwound and rewound rolls. MBO unwinders and rewinders are designed with an isolated festoon integral to the unit, large diameter rollers to reduce curl and easy operation and web up.

Whether unwinding rolls for tight web, high speed finishing, or unwinding and rewinding on an inkjet press, MBO's UW23 and RW23 close the loop on the process.

Specifications

- Web Width Max23"
- Tension MethodTight Web, Core Driven
- Max Web Speed824fpm
- InterfaceNearline or In-line
- ConfigurationModular
- Stock Range40gsm to 300gsm
- Roll Diameter Max52"
- Output2 - 4 Streams
- Make-ready FeaturesSplice Table, QR Roll Chuck

Embellishment Solutions

Flood Coating For Printed Webs

FC 23 Coater

Flood Coating the Web

Coating is an easy embellishment that adds value to the finished product, making them stand out from the rest. The FC 23 Coater can apply Aqueous or UV coatings using an easy to make-ready system that is completely self-contained. MBO America's long history in the commercial print space taught us that the majority of finishing lines for the direct mail and advertising markets included a coater to add value to the ad piece. Look to the FC 23 to add value to the personalized messaging provided by your Continuous-Feed Inkjet press.

Specifications

- Web Width Max23" or 30"
- Coating TypeAqueous and UV
- Application methodAnilox Flood Coat
- Max Web Speed500fpm
- Drying TypeIR and UV
- ConfigurationVertical Stand Alone
- InterfaceType 1 Self Contained

Embellishment Solutions

Dynamic Perforation & Scoring

DPS 60

CC 23

Adding Value to Finishing

The DPS60 adds perforations and score lines directly in-line, making mail pieces and marketing materials more engaging. Its compact footprint integrates easily with press and finishing systems while offering both static and dynamic patterns. With soft anvil scoring, fold cracking is reduced—especially on digitally printed products—so you deliver cleaner results without extra offline steps.

The CC23 brings high-speed rotary contour cutting to your production line, creating custom shapes that grab attention. Along with contour cutting, it can perforate, crease, and kiss-cut at full speed. By connecting seamlessly with MBO systems, it enables you to expand into unique, premium products while maintaining high productivity.

Specifications - DPS 60

- Web Width Max23" or 30"
- Blade Placement1" to 80"
- Anvil MaterialSoft
- Max Web Speed500fpm (subject to config.)
- ConfigurationModular, Scalable
- Stock Range40 gsm to 250 gsm

Specifications - CC 23

- Max. Speed Rating800fpm
- Web Width Range8" to 23"
- Stock Range80 gsm to 200 gsm
- High Pressure Air90 PSI

ZSS 23 Splicer

ZSS 23

Zero Speed Automatic Splicer

The MBO ZSS 23 Horizontal Zero Speed Splicer further reduces makeready and increases up time of finishing lines. Using butt splice technology, the ZSS 23 automatically attaches a full roll to the end of an expiring roll so the press or finishing line can operate non-stop. For longer runs, rolls can be spliced into the line to keep it running, reducing the normal downtime of a manual unwinder by 10-15 minutes per roll. For example, lines finishing a 100# text weight roll (about 30,000 feet) nearly every hour at 500 fpm, gain about 20%-25% uptime using the ZSS 23. Makeready time for stock changes is greatly reduced because the roll can be prepared in advance while the current job is ending, then spliced in immediately.

Specifications

- Web Width10" to 23"
- Maximum Speed800 FPM
- Roll Diameter14" to 50"
- Max Roll Weight3,000 lbs
- Stock Range60 gsm to 300 gsm
- Core Diameter3" or optional 6"
- Power480 VAC, 3 Phase,
150 AMP
- High Pressure Air90 PSI Clean and Dry

B1/B2 Sheetfed Folding

Pallet Feeder

T800.1 Folder T50 Folder

Continuous Feeder

Premium Buckle Folder

The T800.1 is MBO's premium buckle folding machine for full size B1 and smaller sheet sizes. With a blazing 230 meter/minute maximum speed and wide range of fold pattern capabilities, it is well suited to the North American commercial print market. Common 25"x38" sheets can be processed up to 13,755 sheets/hour, and smaller sheets even faster! Even with conservative estimates, this represents a substantial increase in production rates over nearly any earlier vintage folding machine. With MBO's latest M1 controls platform using a simple graphical interface, connectivity to Datamanager 4.0, Remote Access Service and automated functions, the T800.1 provides more uptime and maximum productivity.

B1 Signature Folding

K80 / K8 / K8RS Folder

Premium Combi Folders

With production speeds up to 275 m/min, common 25" x 38" sheets can fold at speeds up to 16,655 sph, MBO's combi folder platform is well suited to the high-performance production of signatures, and other general commercial products. The K-Series, with a variety of models and configurations to fit any application, is packed with advanced features, yet incorporates reduced power consumption so important to preserving our environment. It focuses on the highest level of sheet control, fast make-ready, high productivity, extended uptime, low labor requirement and the best ROI possible. Even conservative estimates show new folders are able to replace earlier vintage folding machines at 2:1 ratios or more!

BSR 550 / BSR 750 Diecutting Solutions

BSR 550 Servo

Precision Die-cutting

The Bograma BSR 550 is a modular, rotary die cutting system designed for B2 (20"×29") sheets. The Bograma BSR 750, by comparison, is designed for B1 (20"×48") sheets. This versatile machine's main use is die-cutting, scoring and embossing for products in the packaging and commercial print space. Unlike flatbed die-cutters, the rotary process does not require nicks in the sheet allowing the waste to be stripped out automatically, producing a "nickless", high quality product – which eliminates the need for further stripping or blanking labor. Magnetic flexible dies can thru-cut, kiss cut, perforate, crease and emboss and are widely available. The modular nature of the machine allows for integration directly with other MBO finishing modules such as folders, gluers, web sheeters and onserters.

Specifications

- Maximum SpeedUp to 12,000 sph
- FeederPile, Pallet, or Web
- Working Widthmax. 550 mm
- Sheet sizemin. 297x210mm
max. 550x750mm

CoBo-Stack 10i/30i Automation Solutions

CoBo-Stack

Multiple Gripper Sizes

55" Stacking Height

Two Pallet Spaces

Automated Stacking

The MBO CoBo-Stack is a completely automatic collaborative robot that automatically transports stacks of folded signatures, books and other applications to a proper pattern on a pallet, reducing the physical demands of the operator. The CoBo-Stack is autonomous, needs no breaks, and is fast to reposition and makeready. There is no need for the operator to remain directly at the production machine, giving them time to carry out administrative tasks making it possible to have 1 operator running 2 machines in a true manufacturing cell. The CoBo-Stack truly fits the new print industry, demanding high productivity with minimal labor and set up time.

Specifications

- Stack Heightmin. 2 1/4"
max. up to 6"
- Stack Weightmax. up to 8 kg
- Stacks per hourmax. up to 300
- Pallet Heightmax. up to 55"
- Gripper Sizes4 sizes available

Services

Installation

You can trust our MBO Certified Techs to have your machine installed quickly and running smoothly. We provide a complete package starting from unpacking the shipping containers to commissioning the equipment to run.

Maintenance

Whether you need a part replaced or your machine is completely down, our Service Team is here to help.

Training

MBO Training courses are designed to increase your operator's understanding of paper behavior, folding principles, issue troubleshooting and problem resolution.

Relocation

Our Service Team can advise you on the logistics and on the necessary requirements for the new locations.

About Us

MBO America was established in 1984 bringing MBO (Maschinenbau Binder Oppenweiler of Germany) folding equipment to the growing US market. Unmatched innovation and dedication to the highest standards of quality made MBO folding equipment an instant success from coast to coast. Now under the umbrella of its parent Komori Corporation, the MBO Group, including Herzog+Heymann, continues to be the leader in post press finishing for the North American Market. MBO America is strategically located in Marlton, NJ, just outside of Philadelphia, and offers a broad array of cutting edge, high-performance finishing solutions for offset, cutsheet and roll-fed digital, hybrid, and pharmaceutical production segments. To be more effective in the North American market, MBO America has taken on the model of a systems integrator, seeking to provide one step production systems for commercial folding, diecutting, roll-fed web finishing and specialty product systems in the direct mail and pharmaceutical markets. From intricate folds and die-cuts to niche packaging with special standards, MBO gives printers an edge over the competition with next-generation achievements.

MBO, H+H and MBO America are internationally known for superior customer and technical support, as well as top-notch consultation services. Our history of pioneering new technology provides the platform for us to serve our customers from concept, through sale and implementation. Year after year, MBO America brings new products and technology to the market that work through industry challenges. Through greater automation, faster make-ready, idle-time and downtime reduction, and overall increased productivity, MBO America ultimately increases profits for its customers.

No matter the solution, we are constantly raising the bar with every configuration in our portfolio. Our modular approach means that each of our finishing systems can be customized to fit your product needs. MBO means modularity, efficiency, productivity and flexibility.
